EXECUTIVE SUMMARY

In 2025, UNICEF's Learning Passport (LP) continues to evolve as a transformative digital education programme, empowering children, young people, teachers and educators with the learning, skills and training to thrive. Its greatest strength lies in its flexibility and adaptability – meeting learners¹ where they are, whether in public schools, community centres, safe spaces, refugee camps, offline environments or at home on personal devices. The programme helps bring high-quality digital learning and learning continuity to millions of children and young people, many of them facing the most challenging circumstances. This impact is made possible through the commitment of our partners – including Adyen, Formula 1, Hapag-Lloyd, Iberdrola, Microsoft, Phoenix Tower International and Sony Group Corporation – whose investment, expertise, innovation and support help ensure that every child, especially the most marginalized, can learn and flourish in a digital world.

Key impact and successes

The year began with a milestone: the LP reached over 10 million children, young people and educators in March, reflecting its rapid growth and far-reaching impact. Additional achievements throughout the first six months of 2025 have further underscored the continued demand for and growth of the programme. Between January and June 2025 key achievements include:

- **Growing global reach:** The LP expanded to three new countries – Democratic Republic of the Congo (DRC), Dominican Republic and Lesotho. The programme is now active in 48

Rabi Karmacharya, Education Specialist and MENA Regional Lead for the Learning Passport, engages with young learners at a community learning centre in Jableh, Syria, to better understand their experiences with the offline Learning Passport programme.

countries, with a total of 11.03 million registered users including children, young people and teachers. This figure includes participants in key learning, training and skilling initiatives delivered through and with the support of the Learning Passport, including [Generation Unlimited](#)'s Passport to Earning (P2E) and UNICEF's Office of Emergency Programmes (EMOPS) frontline responders training initiative.

- **Empowering girls:** The LP continues to address barriers faced by girls and young women in accessing and continuing their education. In Afghanistan, DANISH (the localized LP) is helping teachers and educators – focusing on female teachers – access digital learning and online teacher training when classrooms are inaccessible. In Zambia and Iraq, female 'LP Champions' and youth advocates are inspiring their peers, including female students, to use the LP to build skills and unlock their full potential.

**THE FACT THAT IT IS
DIGITAL MAKES IT
INTERESTING AND
MOTIVATES ME TO LEARN."**

– 17-year-old female student from an urban area in Ghana using the Learning Passport on a laptop once a day at home in a refugee camp

¹ The term 'learners' refers to children, young people and teachers throughout this report.

■ Strengthening system resilience and sustainability:

To enhance long-term systems strengthening and system sustainability, the LP is helping build local capacity, integrating inclusive tools such as UNICEF's [Accessible Digital Textbooks](#), and expanding connectivity through partnerships with [Giga](#), a global UNICEF and International Telecommunication Union initiative. In parallel, it is also exploring AI-powered solutions for scale, personalization and system transformation. These strategies strengthen system-level resilience, streamline delivery and embed the LP within national education ecosystems to ensure sustained access, relevance and impact.

➤ Content advancements

The LP is advancing content innovation through cross-sector partnerships, fostering dialogue on future-focused education solutions, and curating high-quality digital learning resources and tools.

- **Enhancing teacher training:** In collaboration with partners such as the World Bank and others, the LP empowers teachers and educators² through training and workshops on blended learning approaches, AI-powered teaching tools and support with blended learning resources in countries including Jamaica, Nigeria and Lao People's Democratic Republic, with more sessions scheduled throughout the remainder of the year.
- **Content innovation:** The LP works closely with partners to refine digital education materials, improve accessibility, and incorporate interactive content aligned with global best practices, including modules from the [Subject to Climate](#) educational platform.

- **Fostering cross-sector dialogue and collaboration:** Ongoing dialogue and cross-sector collaboration are supported through global LP workshops on diverse topics such as AI applications, licensing and evidence generation and fostering innovation with key education stakeholders.

➤ Monitoring and evaluation

Data-driven design remains central to the LP's effectiveness, with integrated research, monitoring and evaluation driving continuous adaptation and measurable impact across every stage of the programme.

- **Country-level collaboration:** Collaboration strengthens national capacity for impact measurement, with embedded assessments, real-time feedback, and implementation research supporting evidence-informed improvements across diverse contexts.
- **Impact measurement:** Case studies from [Lao PDR](#) and [Lebanon](#) demonstrate measurable gains in digital competencies and platform integration, highlighting the efficacy of the LP and reinforcing the importance of ecosystem support in scaling equitable digital learning.

➤ Priorities moving forward

Looking ahead, the LP is entering an ambitious new phase centred on sustainable scaling, bold innovation and expanding accessible, quality education for the world's most vulnerable learners. Achieving this vision will require strong collaboration and forward-thinking partnerships to harness emerging technologies and unlock equitable, high-impact learning opportunities for all.

IT'S EQUIPPING ME WITH
NECESSARY SKILLS
AND KNOWLEDGE TO
TRANSFORM FROM
TRADITIONAL WAY
OF DOING THINGS TO
ENTIRELY DIGITAL WAY."

– 30yo Male Teacher from a Rural
(countryside) area in Zambia using the
Learning Passport on a Desktop computer
2 to 3 times a week In a public school

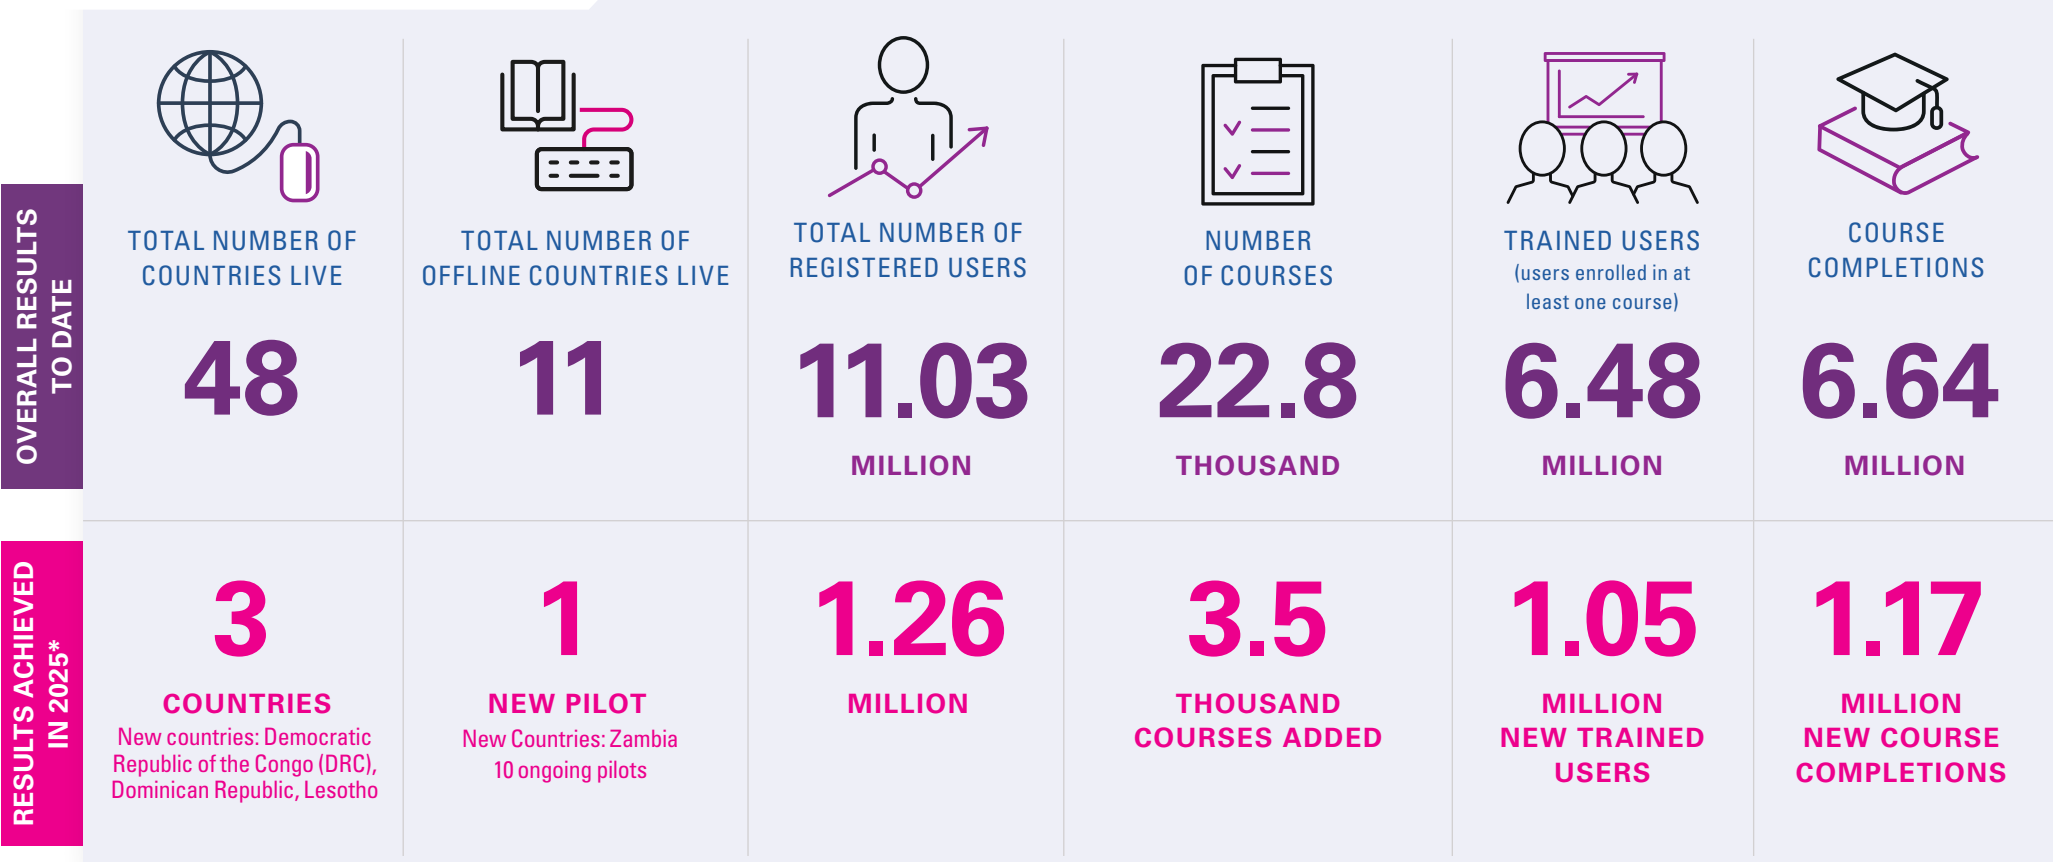

² **Teacher** refers to an individual who instructs learners on a subject, usually in a formal classroom. In comparison an **Educators** support learners with overall development, as well as learning and can be found in various formal and informal settings.

OVERVIEW OF RESULTS

The Learning Passport's achievements are reflected in concrete metrics that demonstrate its expanding reach and deepening impact.

LP BY THE NUMBERS³

*Cumulative from 15 December 2024 to 13 June 2025

These results are inclusive of key initiatives focused on learning, training, and skilling that are delivered through and with the support of the Learning Passport, including Generation Unlimited's P2E programme, UNICEF's Office of Emergency Programmes (EMOPS) Training Initiative, and more.

3 Full definitions included in Annex (page 28)

COUNTRY SPOTLIGHTS

The Learning Passport is having a meaningful impact on children, young people and teachers across diverse countries and regions. It supports learners in formal education settings as well as those who are out of school, including children on the move, helping to ensure learning continuity in emergencies. It also contributes to

equitable learning by supporting rural, underserved, and marginalized communities with essential digital learning resources through the offline LP⁴. Beyond these achievements, the heart of the programme lies in the stories of the learners who bring it to life. Here are some of their voices and experiences.

Afghanistan: A digital lifeline for marginalized teachers and educators

Afghanistan is still grappling with the aftermath of a protracted conflict, extreme climate shocks, and severe economic decline marked by high unemployment and fragile recovery. After the political transition, opportunities for learning were further diminished when girls were banned from attending school beyond Grade 6, including higher education. This compounded an already severe education crisis where 3.7 million children remain out of school, 60 per cent of whom are girls.

The Learning Passport, known locally as DANISH, is playing an important role in responding to these challenges and is poised to expand access to teacher learning and training opportunities. Through mobile and offline capabilities, the platform enables teachers who are unable to attend centre-based, in-person sessions to engage with remote digital learning. Teachers and teacher educators can continue their training on the platform independently – providing an important digital lifeline. This is helping drive equitable access to digital learning and reaching marginalized groups such as female teachers, mainly those from rural communities.

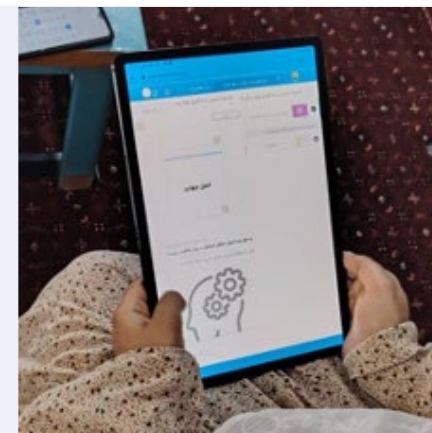

This can be seen in action, in the quiet rural valleys of Laghman Province, where the mountains echo with stories of resilience. **Nasrin⁵** is one of many female teachers rewriting her future – one digital lesson at a time. She was studying at a Teacher Training College for two years before a learning ban was imposed and she was unable to attend in-person classes. With determination and a mobile phone, Nasrin

is reconnecting with her education and training through the DANISH platform. The platform's flexibility allows her to learn at her own pace, in a safe place, transforming her home into a classroom and her phone into a gateway to the world.

“My experience with the DANISH platform has been great and interesting,” she shares with enthusiasm. **“We came to understand the value of digital learning, learned how to use it, and made progress in our lessons. It’s exciting to feel like our teachers are always with us.”**

Nasrin is also lighting the way by teaching and training others to navigate digital learning, becoming a source of inspiration and knowledge in her community. Teaching is more than a career for her, and Nasrin is passionate about contributing to her community's development.

“What keeps us motivated, despite the challenges, is our deep commitment to providing educational opportunities for children in Afghanistan who are deprived of access to learning,” she explains. **“We believe it is our moral responsibility to contribute to the development of our communities by educating and empowering the next generation.”**

Nasrin, 22 years old, engages with learning resources on the DANISH platform (the localized Learning Passport in Afghanistan).

CLICK FOR MORE INFORMATION

⁴ The offline LP enables learners access to essential digital learning resources via a specialized hub device without needing an internet connection.

⁵ Nasrin's name has been changed to protect her anonymity.

Egypt: Offline learning for disconnected communities

In Egypt, education access and inequitable learning remain key challenges, with less than one-quarter of all children enrolled in public pre-primary schools, one million school-age children with disabilities out of school, as are large numbers of refugee and migrant children. Following the COVID-19 pandemic, the Learning Passport Egypt launched in 2021, aiming to support refugees, migrants and displaced children with high-quality remote digital learning. Since its launch, 63,000 users have registered on the LP across the country.

In 2023, in collaboration with the Ministry of Education, the offline LP was successfully piloted in the rural Sharqia Governorate. The programme was introduced in four Egyptian Community Schools aimed at supporting children who had dropped out of public schooling. In 2024, the offline LP was scaled to an additional 20 Egyptian Community Schools – helping bridge a critical gap for schools and learning centres ready to mobilize the LP but grappling with poor connectivity and limited infrastructure.

Ten-year-old **Mannsah** is one of the many Sudanese children accessing high-quality educational content on the offline LP at the Sudanese Displacement Community Learning Centre (SDCLC). Established in 1990, the SDCLC offers a vital and comprehensive

I STARTED USING MY MOBILE MORE OFTEN WHEN I FOUND A TOOL THAT COULD GIVE ME THE MEANING OF NEW WORDS I DIDN'T KNOW ON THE INTERNET. THE MORE I GO ONLINE, THE MORE I DISCOVER NEW THINGS TO LEARN."

school experience for Sudanese children who cannot access formal education opportunities. Learners can access digital learning resources aligned with the Sudanese curriculum here, including PDFs, videos, and interactive exercises. UNICEF is also providing digital training and basic digital literacy content for teachers, fostering the integration of digital pedagogies. This includes preparing lesson plans across a range of subjects and supporting blended learning in classrooms.

Born in Egypt to a family fleeing the conflict in Sudan, Mannsah is among the thousands of displaced Sudanese children living in the country. He grew up with his father and two older siblings in Cairo's bustling Nasr City neighbourhood – one of the oldest communities for Sudanese refugees. As a tech and gaming enthusiast, Mannsah enjoys using educational technology through the LP. He explains how the platform is expanding his vocabulary and inspiring his studies: **"I started using my mobile**

Ten-year-old Mannsah is one of the many Sudanese students engaging with the Offline LP at Egyptian Community Schools.

more often when I found a tool that could give me the meaning of new words I didn't know on the internet. The more I go online, the more I discover new things to learn."

Driven by his own positive experiences, he has become an informal champion of the offline LP – encouraging his peers to explore the platform and helping them get started. He is also advocating for more digital learning opportunities, leading the school to increase the number of classes in the computer lab and ensure more regular use of digital tools in teaching. Mannsah's journey highlights the transformative power of digital learning, a testament to its potential to break barriers and create inclusive learning opportunities for all.

INFORMATION

Iraq: Unlocking youth potential

Iraq boasts a growing population of 40 million - over 60 per cent of whom are under the age of 25. Despite the promise and potential of youth, young people in Iraq face complex challenges that impact their growth and prospects, including poverty, climate change and difficult living circumstances. Thirty-seven per cent of young people are not engaged in formal or informal education, employment or training. Opportunities to gain essential digital, life, and entrepreneurship skills are limited, leaving young people without the tools to shape their futures and contribute to their communities.

The Learning Passport Iraq addresses these issues by offering important opportunities to continue learning online and providing free, inclusive online educational pathways for young people across the country. The LP is helping rebuild learning pathways and engaging youth to support the transition from learning to earning. Launched in 2022, in collaboration with the Ministry of Youth and Sport as well as youth centres and universities, the initiative reaches learners through both online and in-person sessions. To date, 12,700 learners have benefitted from 119 courses and more than 90 assessments.

Professor Kamal Al-Din Rashad Hamid from the Northern Technical University in Ninawa, is a firm believer in investing in young people and creating

BEING PART OF THE LEARNING PASSPORT CHAMPIONS HAS CHANGED THE WAY I SEE EDUCATION... IT'S NOT JUST ABOUT ACQUIRING NEW SKILLS – IT'S ABOUT BUILDING MY FUTURE."

meaningful opportunities for youth development, community engagement and empowerment. Since 2023, Professor Kamal has delivered training sessions to introduce students to the Learning Passport and demonstrate how digital learning can help bridge educational gaps. His efforts led to the establishment of a youth group of 'Learning Passport Champions,' committed to promoting the platform across several universities.

Twenty-three-year-old **Sara Khairi** is one of these champions. A third-year university student in the Department of Computer Engineering and Artificial Intelligence, she was introduced to the LP platform and soon began using its courses regularly to support her education. She noticed a significant improvement in her skills, finding the courses and certificates highly valuable in preparing her for the future job market. Motivated by her own experience, she became one of the first champions, helping to raise awareness and support her peers in using the platform.

Sara Khairi, 23, is one of the LP Champions engaging her peers with the programme.

"Being part of the Learning Passport Champions has changed the way I see education," Sara says. "It's not just about acquiring new skills – it's about building my future. The platform gave me the tools I needed, and now I'm helping others do what I did. I feel empowered and proud to be part of this movement."

Sara believes that when young people are treated as partners in the learning process, their engagement and ownership increase significantly.

The LP is supporting young people in Iraq to uncover their potential, so they can step into the future with determination.

Jamaica: Students discover a spark for learning

Despite boasting high student enrollment rates, Jamaica's education system faces challenges with significant learning gaps. While 99 per cent of children complete primary school, quality education remains a concern. A 2022 Jamaica Multiple Indicator Cluster Survey (MICS) provides critical insights into the educational landscape, finding that among 7- to 14-year-olds, approximately 38 per cent lack foundational reading skills and 50 per cent have not developed foundational numeracy skills.⁶

Addressing these learning gaps requires targeted, evidence-based interventions guided by insights from studies like the MICS. To address these challenges, UNICEF and the Ministry of Education, Youth, Skills and Information launched the Learning Passport in 2023 to strengthen foundational learning and boost learning outcomes for young students. The platform now supports students in Grades 1–3 with national curriculum-aligned courses, including courses covering literacy, numeracy, civic skills, health and family life education, and integrated studies. The LP is available online, with plans for the offline LP underway, and includes 167 digital courses and 225 assessments, offering a self-paced learning experience.

Every summer, eager young learners also participate in UNICEFs' 'Summer Spark'

campaign, a eight-part weekly challenge delivered over the summer break. The campaign invites students to go on a learning adventure and put their problem-solving, literacy and numeracy skills to the test, encouraging them to explore and engage with additional content on the LP platform. Six-year-old **Taylor Thompson** is one of the winners from last year's challenge, supported closely by her mother **Shelly-Ann Thompson**. The mother-daughter duo enjoyed taking part in the challenge, with Shelly-Ann finding the platform to be **"culturally relevant with age- and stage-appropriate materials."** The games-based learning approach made it easy for her to support her daughter to complete the activities.

Shelly-Ann noted that Taylor enjoyed the Literacy 1-2-3 stories, which are Accessible Digital Textbooks (ADTs), as well as the Jolly Phonics songs in some of the lessons. She was pleased with the independent learning opportunities, which enabled Taylor to confidently navigate the platform on her own. She added, **"It makes learning fun. I know it will definitely help keep Taylor engaged and better prepare her for her next school year."**

The Ministry of Education, Skills, Youth and Information has exciting plans for further growth and scaling of the LP, including:

Taylor Thompson, a 6-year-old participant in the Summer Spark Challenge, near her home in St. James, Jamaica.

© UNICEF JAMAICA/SHELLY-ANN THOMPSON

- Curating content to extend English, numeracy, science and social studies learning.
- Reaching older students through the addition of key content for key stage assessments at Grades 4–6.
- Supporting the transition from primary to secondary level by linking content to the national Primary Exit Profile

6 This Multiple Indicator Cluster Survey (MICS) was conducted by the Planning Institute of Jamaica (PIOJ) in collaboration with UNICEF, the Inter-American Development Bank (IDB) and the Statistical Institute of Jamaica (STATIN).

Montenegro: Leading digital transformation

In Montenegro, digital learning has evolved from a remote-learning response during the COVID-19 pandemic into a cornerstone of systemic reform and wider digital transformation planned from 2025 to 2035. At the heart of this approach is the national digital learning platform Digionica, which has been incorporated into the Learning Passport. Officially launched in December 2021, through a partnership between the Ministry of Education, Science and Innovation (MoESI) and UNICEF, the platform is fully integrated into the Digital School framework – an ambitious national effort to ensure all learners and educators are digitally equipped and connected.

Accessible across all levels of formal education, from pre-school to tertiary, the platform supports diverse audiences, from students, educators and parents to school professionals. As of June 2025, almost 38,000 users are registered on the platform. It currently offers 1,300 courses across 22 learning paths and 61 subject categories. The platform boasts high engagement rates, with more than 50 per cent of teachers and almost a quarter of students nationwide actively using it. This engagement continues to grow, with a 6 per cent increase in registered users and a 12 per cent increase in total course completions over the last 6 months.

Beyond the numbers, Digionica is a critical enabler of Montenegro's digital education vision, championed in the country's Strategy for Digitalization of the Education System 2022–2027. It plays an important role

in supporting both in-person and remote teaching, improving quality of and access to education as well as bolstering the overall resilience of the system. This has been strengthened by strategic initiatives such as developing digital content for STEM (science, technology, engineering, and mathematics), training teachers on media and information literacy, and leveraging the platform for online learning, teaching and collaboration. EdTech Hubs were established in 12 pilot schools in six municipalities in the northern region, enabling students to acquire 21st century skills through regular classes and extra-curricular activities. The initiative's success led MoESI to scale the hubs to 102 schools nationwide, with its learnings and impact contributing to broader EU-supported reform and growth agendas in the region.

For **Maša Mališić**, a 10-year-old fifth-grade student, Digionica is more than just a learning tool – it is a valued companion. When she had to miss lessons due to illness, the platform helped her to keep up with her studies through learning resources including interactive videos and quizzes. Maša speaks positively about the programme. **"The digital school platform helps me study,"** she explains. **"I watch videos to get ideas for homework. The quizzes and knowledge tests are the most fun part."** Her mother, Dragana, also appreciates the dedicated parental section,

Ten-year-old Maša Mališić is supported by her teacher Veronika Vraneš at Drago Milović Primary School in Tivat, Montenegro.

which helps families support and engage with digital learning through resources on topics such as cyberbullying and healthy screen time.

The comprehensive support provided by the platform extends to classrooms, as teachers can use it to complement their lessons and support blended learning. Maša's teacher, Veronika Vraneš, appreciates the flexibility and quality of the learning content available on the platform. Principal **Slavka Mirković** proudly shares how the platform has improved communication and supported different learning styles. **"I invite all schools to embrace digital platforms,"** she said. **"Together, we can build an environment of innovation and collaboration."**

Montenegro's journey with the Learning Passport reflects a broader commitment to not only adapt to the digital age, but to lead it, with equity, resilience, and vision.

Nigeria: Empowering educators

Nigeria is facing one of the world's most urgent education crises, further complicated by overlapping challenges such as rapid population growth, armed conflict, poverty and gender inequality. Although primary education is officially free and compulsory in Nigeria, the country accounts for one fifth of the world's out-of-school children. An estimated 10.5 million children aged 5 to 14 are not enrolled in school, and only 61 per cent of children aged 6 to 11 attend primary school regularly. Girls face even greater obstacles, driven by economic hardship and socio-cultural norms, with female primary attendance rates below 48 per cent in the northeast and northwest of the country. A protracted conflict has also devastated education infrastructure across the northern region, leaving approximately 2.8 million children in urgent need of education support.

The Nigeria Learning Passport (NLP) is helping to address some of these challenges to ensure children and young people have access to safe, equitable and high-quality education. Launched in 2022 by UNICEF and partners, the NLP is reaching students and teachers at all levels, spanning primary to secondary education. Students and teachers are supported with more than 16,000 curriculum-aligned learning materials in four major Nigerian languages – English, Hausa, Igbo and Yoruba. The platform is available both online and offline, ensuring learning continues even in remote and conflict-affected areas with limited connectivity. As of June 2025, the NLP had over registered 1.9 million users across all

36 states, with a balanced gender distribution (49 per cent female, 51 per cent male). Progress to date in Nigeria is made possible through strong global, regional and in-country partnerships – including Airtel, IHS Nigeria Limited, Sony Group Corporation and others – whose collaboration is helping to expand access, strengthen teaching, and improve learning outcomes nationwide.

Mallam Abubakar Hassan is a teacher and facilitator at a Qur'anic school in Argungu, Kebbi State. For years, he faced significant challenges teaching complex subjects like mathematics and civic education in the Hausa language. Limited teaching resources and traditional methods made it difficult to keep students engaged. In 2023, Abubakar started leveraging the NLP in his classroom to enhance his teaching, redesigning his lessons using the platform's interactive materials. He is also one of 1,600 teachers receiving support from UNICEF through training, ongoing mentoring and coaching support from formal schoolteachers to strengthen his teaching skills.

With his increased confidence and passion for digital learning, Abubakar is inspiring students to engage with interactive lessons that spark creativity. He appreciates the impact of the NLP on his own development as well as his students' learning progress.

"Teaching civic education and mathematics in the Hausa language used to be challenging for me," he says. "However, everything changed with the introduction of the NLP platform. I now feel more confident in my

Mallam Abubakar Hassan, a 38-year-old teacher at Mallam Yusuf Gidan Dabi Integrated Qur'anic School, supports a student using the Nigeria Learning Passport.

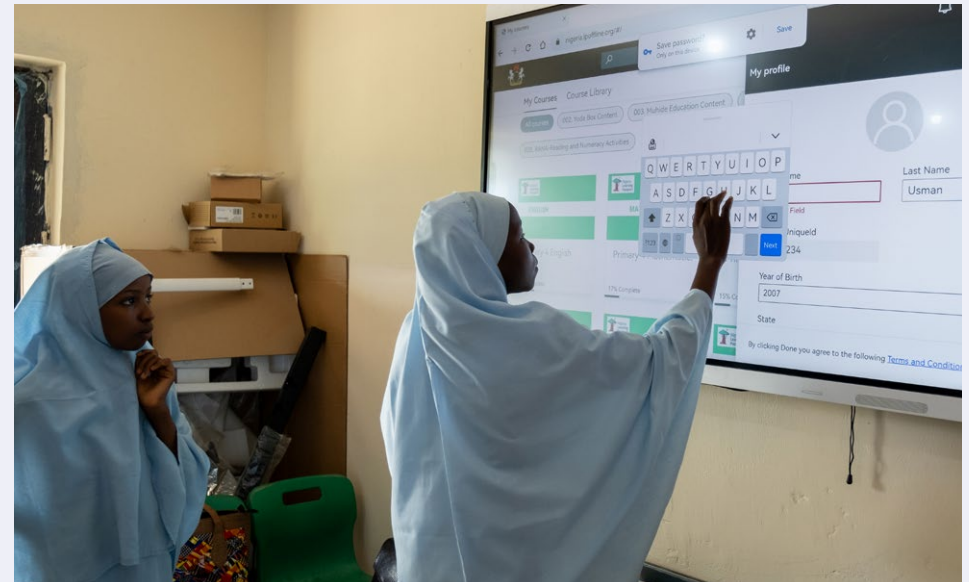

teaching abilities. I can also seek assistance from my peers in formal schools. The NLP platform has not only transformed my teaching approach but also enhanced the learning experience for my students."

Beyond Abubakar's classroom, a culture of shared learning and growth is taking root. More teachers are adopting the NLP and blended learning in their classrooms, fostering a collaborative learning environment that strengthens teaching methods and boosts student engagement. When dedicated teachers are supported by innovative learning tools and collaborative systems, they can drive meaningful improvements in learning outcomes, empowering students with the skills and knowledge they need to succeed.

NIGERIA: INSIGHTS, SUCCESSES AND PLANS

- 2,260 schools connected to the internet through partnerships with Airtel and IHS Nigeria Limited.
- 13,500 digital devices distributed in underserved rural schools.
- 66,000 teachers and education officials have been trained in digital pedagogy and platform use.
- Foundational subjects such as English, mathematics, digital literacy, civics and science are among the top courses accessed, reflecting curriculum priorities.
- Continuous community and parental engagement has enhanced the platform's relevance and uptake.
- Surveys show that 91 per cent of learners report improved learning, and 86 per cent indicate increased classroom confidence since using the NLP.
- ▶ 200,000 parents and caregivers will be engaged to build strong community support for learning.
- ▶ Educational outcomes of more than 100,000 teachers will be boosted through digital literacy and blended learning training.
- ▶ Longer term plans also include expanding the offline learning model to additional schools without internet access, supported by the distribution of tablets.

Zambia: Youth leaders are driving digital learning

In Zambia, the quality of education and learning remains a pressing issue, with learners overall struggling to meet minimum pass marks of 40 per cent. For Grade 5 learners, average scores are low – 35 per cent in English and 31 per cent in mathematics. Access to learning is another challenge, with transition rates from primary to secondary school also low at just 63 per cent, primarily due to a lack of available spaces. Since 2022, the Learning Passport Zambia has been helping bridge the gap in education accessibility, helping to provide access to high-quality educational materials anytime, anywhere. It ensures that children and young people from marginalized communities and out-of-school learners have the resources they need to continue learning. The platform supports learners from early childhood to secondary education and helps teachers implement blended learning.

To date, almost 17,000 students and teachers are on the platform where 340 courses are available in seven local languages. But there are still many more learners to reach. With the support of UNICEF, Zambia's Ministry of Education, and Airtel (a multinational telecommunications company), a broader nationwide effort is underway to expand access to digital learning. At the forefront of this strategy is a national network of 100 'Youth Leaders'

from across all 10 provinces of Zambia. These youth advocates are undertaking training and mobilizing in their communities to champion digital learning, digital literacy and inclusive education.

In Kabwe, Central Province, a group of youth advocates including 18-year-old **Becky Masumba** are visiting Broadway Secondary School to introduce the LP Zambia to students and teachers there. These sessions highlight the benefits of digital learning, include a practical demonstration of the platform and offer firsthand experiences of the programme. Becky shares the positive impact the LP has had on her own learning, stating, **"We used to walk around looking for materials. Now, you can just go on your phone and find them. It has math, storybooks, audio lessons – even resources for when the teacher is not available."**

Youth advocates are helping showcase how the LP Zambia can reinforce classroom learning, enhance

I WANT THE LEARNING PASSPORT TO BE WIDELY KNOWN AND ACCESSIBLE TO ALL LEARNERS."

– Precious, a 19-year-old first-year university student studying law

Becky Masumba, an 18-year-old youth advocate, delivers a presentation at Broadway Secondary School, Kabwe, Central Province.

digital skills and make learning more independent, flexible and accessible. Fellow youth advocate **Precious**, a 19-year-old first-year university student studying law, appreciates the opportunity to enhance digital literacy through the LP Zambia. **"We are moving toward a digital world,"** she says. **"Everything is becoming digital now. I want the Learning Passport to be widely known and accessible to all learners."**

Becky and Precious are among the young people helping to transform learning in their communities, empowering their peers and ensuring young people gain the skills needed to thrive and shape their own futures. The youth advocate network is also contributing to UNICEF Zambia's Adolescent and Youth Engagement Programme, helping create an important and inclusive platform for young people to voice their opinions, participate in decision-making and access essential resources.

SUPPORTING CHILDREN DURING EMERGENCIES

The Learning Passport continues to serve as a transformative solution for children and communities disrupted by conflicts, natural disasters and displacement. Throughout the year, UNICEF continues to reach the children and young people who need it most by expanding digital learning access, equipping educators with essential resources and

deploying offline solutions for displaced and vulnerable learners. These initiatives reaffirm UNICEF's ongoing commitment to making education accessible and equitable, even in the most difficult circumstances. These advancements in emergencies are made possible through global partnerships with Sony Group Corporation and more.

Natural disasters

Bangladesh:

In Cox's Bazar, **Bangladesh** - the world's largest refugee camp- the Learning Passport is transforming teacher training at scale and supporting displaced Rohingya communities. By offering accessible, contextualized professional development in native languages and blended formats, UNICEF is equipping teachers with the tools to enhance instruction and overcome limited resources, policy challenges, constrained learning environments and skill gaps.

Over the past six months, capacity-building initiatives with seven partner organizations have accelerated. More than 3,000 volunteer teachers have taken part in in-person training focused on digital skills, email safety, and data protection, supported by the distribution of tablets. Today, the Learning Passport is positioned to reach 250,000 teachers and learners across both refugee and host communities – narrowing the digital divide and reinforcing education amid political and environmental challenges.

Myanmar:

Amid ongoing conflict and natural disasters, the Learning Passport **Myanmar** remains a vital tool for ensuring continuity of learning. The platform hosts more than 660 courses, including emergency response content related to earthquakes, parenting tips for disaster situations and interactive lessons for Grade 1 students. These resources are available in the Myanmar language as well as several ethnic languages. Following the March 2025 earthquake, additional resources such as guides on how parents can talk to children about earthquakes were also translated into local languages and added to the platform.

These resources are also being leveraged by partners in the field through the LP, to support their education response. Currently, more than 120 students and nearly 1,000 facilitators and community volunteers are actively using the platform in the field. Collectively, learners have

enrolled in 19,000 courses and completed 9,200 on the platform. Plans are also underway to expand the platform with ethnic language content and Early Childhood Care and Development (ECCD) courses for teachers and facilitators. The platform's growth is reinforced by an ongoing drive to raise awareness of the LP through social media campaigns.

Libya:

The Learning Passport continues to support young people in **Libya** under the national brand 'My Future in My Hands.' Plans are underway to expand the platform's reach to cover all grades, as it currently supports only Grades 4-6 Arabic, math and science. Content development is also underway to support this expansion and generate age-appropriate learning resources for children and young people across all grades.

War and conflict

Poland:

In **Poland**, the Learning Passport continues to support Ukrainian refugee children amid the ongoing conflict. The arrival of 195,000 Ukrainian students prompted major shifts in Poland's traditionally mono-ethnic education system, with a drive to foster more inclusive and safe learning environments. To meet this need, the platform offers capacity-building courses and webinars tailored to educators in multicultural settings.

In 2025, UNICEF expanded its Mental Health and Psychosocial Support response, launching an eight-module course on intercultural integration and trauma-informed teaching in May, followed by the "Minds & Hearts" programme in June – equipping 100 teachers with practical tools for crisis response, multicultural engagement and stress management. Since January, 768 educators have accessed the platform, reaching an estimated 16,896 students, 55 per cent of whom are refugees, with vital support for adapting to new educational environments.

Sudan:

In **Sudan**, amid conflict that has displaced millions and closed schools, the LP plays a crucial role in providing continued learning for more than 44,000 students. UNICEF Sudan has developed and added additional content to the LP to support Grades 9 and above. The platform is also being deployed in schools and learning centres across Northern, Red Sea and Kassala states, providing vital educational

support. The LP application has also been installed on offline tablets, which are widely used in safe learning spaces to support internally displaced children, ensuring education remains accessible.

State of Palestine:

UNICEF continues to work closely with the Ministry of Education and Higher Education (MEHE) in the **State of Palestine** to establish the Learning Passport as a national digital learning programme supporting learning continuity against a background of turmoil in the region. To support this, 100 offline hub devices have arrived in the State of Palestine and will be distributed across 100 rural schools without connectivity in the West Bank. This first phase also includes the deployment of the online LP in 100 schools.

The Ministry has established a steering committee and five dedicated working groups – focusing on digital content, development of teacher capacity, school implementation, technology support and monitoring and research – to drive the programme forward. A local organization has also been selected to support the MEHE to design and develop learning content, ensuring that the platform delivers engaging, appropriate and impactful educational resources.

UNICEF Office of Emergency Programmes (EMOPS):

The Learning Passport team, in collaboration with the UNICEF's Office of Emergency Programmes

(EMOPS) and Office of Innovation (OOI), along with Humanitarian U, is supporting the No Language Left Behind (NLLB) initiative in the **Democratic Republic of the Congo (DRC)**. In February 2025, the NLLB initiative was piloted in Kinshasa, engaging 39 humanitarian workers from across 15 local and national NGOs. Participants completed 12 interactive modules covering humanitarian action, child protection, gender-based violence (GBV), protection from sexual exploitation and abuse (PSEA) and AI tools in humanitarian work. These key learning resources were made available through the LP in English, French and Kiswahili, addressing language barriers and providing essential skills training for frontline workers.

Results from the pilot indicated high levels of engagement, with 85 per cent of humanitarian workers completing all modules within four months. Ninety-seven per cent also reported that the training would "strengthen their job performance and employment prospects." "**We warmly welcome this beautiful initiative for a noble cause – humanity,**" one worker said, adding that if the initiative continued, it would "improve the quality of our interventions centered on the child in the humanitarian response." This promising pilot followed a swift pivot from the Goma region to Kinshasa after an outbreak of armed conflict in eastern DRC. The platform's flexibility ensured the continuity of critical capacity-building efforts, demonstrating the Learning Passport's adaptability in crisis-affected and fragile settings.

Unrest and instability

Lebanon:

In **Lebanon**, the Learning Passport is central to UNICEF Lebanon's education strategy. It is currently integrated into two key pillars – the Multiple Flexible Pathways (MFP) and the formal education system, branded as 'Madristi' (My School). Through Makani Centres and Dirasa Schools, out-of-school Lebanese and Syrian children are engaging with foundational literacy and numeracy learning courses.⁷ The LP continues to support the MFP programme across 200 Makani Centres and Dirasa Schools. Fifty centres have also been equipped with offline hub

devices, helping navigate connectivity issues. The Ministry of Education and Higher Education continues to develop additional content for the LP and equips teachers with comprehensive training on integrating the platform into their classrooms. Increased uptake is expected when the new academic year starts in September 2025.

Egypt:

With 63,000 users on the platform, LP **Egypt** offers a digital learning solution for out-of-school and refugee children. Learners of different

nationalities, such as Sudanese, Syrian, Eritrean and Ethiopian, continue to use the platform to access digital learning resources that include national curricula and more. UNICEF is also committed to expanding the LP in the southern city of Aswan, where there is a high population of Sudanese refugees fleeing the ongoing conflict in Sudan. This year, the LP will be implemented in 24 community learning centres to reach and support these communities. Planning is also underway for an ambassador initiative aimed at engaging young people and promoting the use of the LP.

⁷ Makani Centres and Dirasa Schools are parts of wider UNICEF initiatives aimed at enabling children to continue learning in community- and school-based settings.

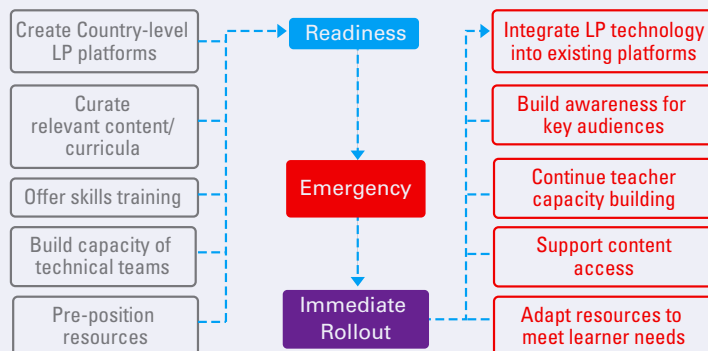

EMERGENCY APPROACH AND FOOTPRINT

The program can be implemented immediately in response to a humanitarian crisis that disrupts education systems, aiming to minimize learning interruptions for vulnerable communities and populations. This includes establishing country-level LP platforms, curating relevant content such as formal education curricula, providing skills training, enhancing the capacity of technical teams, pre-positioning resources such as Digital School in a Box* and adapting resources to better meet the needs of learners.

Learning Passport Emergency Procedure

Goal: minimize disruption to learning

 EMERGENCY RESPONSE
 GLOBAL FOOTPRINT

* To be further developed in 2025-2026.

Note: This map does not reflect a position by UNICEF on the legal status of any country or territory or the delimitation of any frontiers.

CONTENT DELIVERY & INTEGRATION

Meeting learners wherever they are demands innovative approaches to content creation and delivery. The Learning Passport continues to curate and develop high-quality digital learning resources and experiences for children, young people and educators. This includes an increasing focus on ensuring learners are equipped with the right skills to thrive in a digitally driven and future-facing world. By integrating cutting-edge resources and adaptive learning tools, the platform is shaping education to meet the demands of the modern era.

Over the past six months, several key events and initiatives have contributed to these efforts.

- **Leveraging AI tools for teacher training:** In collaboration with the World Bank, the LP team delivered training and workshops on AI for teacher training across multiple countries in the Latin America and the Caribbean Region, including Jamaica. These sessions equipped educators with AI-driven tools and strategies to enhance teaching and learning.
- **Blended learning support for teachers:** The team developed tailored blended-learning teacher training lessons to support educators through face-to-face instruction, digital activities and physical resources in Nigeria and Lao PDR. Additionally, six new animated blended learning resources were added to courses on the LP.
- **Expanding learning opportunities:** The LP partnered with leading content providers to expand resources on accessibility, inclusion and digital literacy, including integration of Subject to Climate teaching modules and gamified interactive lessons, helping to enhance engagement and learning outcomes.
- **Enhancing content design:** The Learning Passport team partnered with UNICEF country offices to enhance, refine and develop content that upholds best practices in content design. This included workshops focused on optimal content specifications, emphasizing visual design, user experience and the principles of Universal Design for Learning in countries such as Congo Brazzaville, Ethiopia, Gabon, Lao PDR, Lesotho, Liberia and Sao Tome Principe.
- **Exploring AI for capacity building:** The LP team led Community of Practice workshops that explored diverse topics, including AI and licensing, evidence generation, chatbots, teacher training and digital literacy tools. These sessions fostered meaningful dialogues with key stakeholders and thought leaders in the sector, including organisations such as TeachAI, Code.org, MIT Raise and Team4Tech.

An online UNICEF Learning Passport workshop on leveraging AI tools and resources for education.

- **Strengthening collaboration and innovation:** The platform drove ongoing dialogue, cross-sector collaboration and partnerships both externally and within UNICEF. These efforts fostered deeper connections across UNICEF programmes, further enhancing the LP.

The LP will continue to expand and strengthen these initiatives throughout the remainder of 2025, focusing on:

- Adaptation and development of content to support the accessibility needs of learners.
- Enhanced processes for efficient customizations, such as seamless replication of assessments.
- Development of shortened blended learning courses, with new animations embedded.
- Advancing AI-driven educational support and training for educators.

STRATEGIC PARTNERSHIPS & GLOBAL ENGAGEMENT

Strategic partnerships and global, multi-stakeholder collaboration continue to be key drivers behind the growth and evolution of the Learning Passport. Working closely with governments, private sector partners and civil society organizations, the programme harnesses technical expertise, financial resources and innovative tools to advance inclusive and equitable learning opportunities.

A milestone: Celebrating 10 million learners

This collaborative foundation has been instrumental in scaling the impact of the LP – and in March 2025, it enabled the initiative to reach a major milestone: The Learning Passport surpassed 10 million registered users – children, young people and educators – across 47 countries. Beyond the numbers, this achievement is a testament to the dedication of the educators who drive the LP, the motivated learners engaging with the platform and the committed partners and stakeholders who help bring the programme to life. [Full press release here.](#)

The milestone was marked with a social media campaign, including multiple posts shared across diverse regions and countries such as Africa, Germany, Japan, Latin America, Sierra Leone, Spain, the UK, the USA and Zimbabwe. UNICEF teams, National Committees, partners and stakeholders mobilized across social media channels to reflect on the progress made since the LP journey started in 2018 and to celebrate the achievement and the teams, supporters and partners driving the Learning Passport's shared vision of equitable education.

Future ready and scaling for impact

Building on this momentum, the LP is entering an ambitious new phase – one focused on scaling sustainably and harnessing emerging technologies to equip children and young people for success in a digitally driven world. The programme will sharpen its focus on reaching vulnerable and underserved learners, including children in crisis settings, out-of-school youth and the educators who support them. This next phase will be centred on integrating AI-powered tools for educators, offline-first solutions for connectivity-challenged environments and flexible self-directed learning models that ensure education remains accessible, relevant and resilient.

To realize this vision, the Learning Passport seeks committed partners to co-develop and advance critical areas of the programme. This includes contributing technical expertise, innovative products and services, catalytic funding and in-kind support. Priority areas for support include developing governance and licensing frameworks to enable an open-source transition; developing offline-ready AI tools; designing inclusive content; shaping adaptive learning pathways; and pursuing Digital Public Good recognition.

Through these collective efforts, the project aims to unlock scalable, inclusive digital learning for every learner, everywhere.

UNICEF extends its heartfelt thanks to all its partners, both longstanding and new, for their unwavering commitment and support. Together, these partnerships are strengthening the Learning Passport's ability to ensure that all children, especially the most marginalized, can learn and thrive in a digital world.*

KEY MILESTONES

RESEARCH MONITORING & EVALUATION

Robust research, monitoring and evaluation remain central to the Learning Passport, driving the programme's efficacy and keeping it insight-driven and responsive to the needs of children, young people and educators. Insights drawn from data and real-time feedback are used across every stage of the programme from planning and content development to delivery and scaling, to help ensure continuous development and impact. This approach positions the LP as a responsive and resilient platform – guided by evidence and continually evolving to meet the changing needs of learners and educators in the face of rapidly shifting global challenges.

This system-wide commitment to data-driven learning is reinforced through collaboration with country offices aimed at strengthening national capacity for impact measurement. The LP works closely with country offices to support rigorous monitoring and evaluation, data analysis, and research. It prioritizes the embedding of pre- and post-assessments in courses, which enables deeper analysis of platform usage, engagement and learner performance and facilitates benchmarking across different contexts and demographic groups.

Over the past six months, the Learning Passport has collaborated closely with key countries – including Lao PDR, Nigeria, Jamaica and Sierra Leone – to embed assessments into revised courses, enhancing the measurement of learning progress.

Lao PDR

In Lao PDR, the Ministry of Education and Sports, in partnership with UNICEF, led teacher and school leader trainings across 600 schools during the 2024–2025 academic year. The sessions focused on digital tools, pedagogical strategies and practical classroom application. Feedback from teachers and school leaders was positive, with many participants reporting increased confidence in using the Learning Passport (locally known as *Khang Panya Lao*) and other digital technologies.

© UNICEF ZIMBABWE

Each training session was accompanied by a 16-question assessment covering digital literacy, online safety and blended learning. This was administered both before and after the sessions to measure knowledge and skill development. Key results and insights include:

- Among the 851 participants who completed the pre-training assessment, the average score was 63 per cent.
- Among the 826 participants who completed the post-training assessment, the average score rose to 74 per cent, indicating notable gains in teacher knowledge of digital skills.
- Lower post-training scores on online safety indicated the need for further support in this area.
- Data from 546 participants who completed both assessments showed an 18 per cent average score increase, with approximately 80 per cent of respondents improving their total score in the post-training assessment.
 - ▶ Progress was especially pronounced in areas such as blended learning integration and effective use of the LP platform.

These results underscore the training's effectiveness in advancing digital competencies and provide a clear path for strengthening future sessions.

 Lebanon

Building on the success of country-driven implementations, Lebanon's experience demonstrates the value of piloting localized platforms to assess readiness and undertaking research to inform scaling decisions. During the 2023–2024 school year, UNICEF, in partnership with the Ministry of Education and Higher Education (MEHE) and the Centre for Education Research and Development (CERD), introduced 'Madristi' – a localized version of the Learning Passport – in 14 public schools. Madristi was developed and introduced in Grades 6 and 7 for math, science, and language instruction.

To better evaluate the platform's integration, implementation research was conducted in collaboration with government partners to assess teacher readiness, student engagement and system-level enablers and barriers to technology integration in the public education system. The report and key findings from this research are due to be published in summer 2025.

During this proof-of-concept phase, more than 2,400 students and nearly 300 teachers became active users of the platform, with both groups demonstrating strong engagement. Despite infrastructure constraints, especially around connectivity, teachers demonstrated high levels of motivation, resilience and adaptability when integrating technology-enhanced instruction into their classrooms. An ecosystem of support that included government bodies, school leaders and technical teams was critical to overcoming technical hurdles and enabling effective platform use.

Results from the pilot confirmed that digital learning is both feasible and desired within Lebanon's formal education system. Ten key recommendations for scaling the LP across the country were identified, organized around three major themes: improving connectivity, enhancing teacher support and training and refining the platform itself.

As of June 2025, there are 54,000 registered users on the platform, including 30,000 students and 22,000 teachers.

From pilots to full-scale implementation, country experiences illustrate how the LP is advancing digital learning systems that are context-aware, evidence-informed and impact-driven. Through embedded monitoring, assessment and research, the platform drives measurable learning gains while building the foundations required for sustainable, system-wide transformation.

INNOVATION AND INTEGRATION

The Learning Passport is not just expanding – it is evolving. As part of a bold digital transformation agenda, UNICEF is investing in sustainable, inclusive and future-ready innovations that strengthen education systems, deepen local ownership and equip learners and educators with the tools they need to thrive in the 21st century. From platform enhancements to content design, this section highlights how innovation is driving transformative impact.

➤ Open source for sustainability and scale

To promote national ownership and cost-effective scaling, the LP is transitioning to an open-source model. This shift allows governments to locally host and adapt the platform while fostering integration with existing digital ecosystems. Being open-source is a key requirement to be recognised as a Digital Public Good (DPG) – recognition that will validate the platform's alignment advancing transparency, adaptability, and long-term sustainability in line with global digital development principles.

➤ Looking ahead: AI-powered transformation for teachers, learners and systems

As the Learning Passport enters its next phase, AI integration is a central enabler of scale, personalization and teacher empowerment. The enhanced platform will embed AI across three core areas:

- **Content and learning experience:** Adaptive learning pathways, AI-driven diagnostics, and multilingual voice tools will personalize learning journeys, even in low-connectivity and linguistically diverse contexts.

© UNICEF/UNI685098/TINAGO

- **Teacher empowerment and tooling:** Teachers will benefit from AI co-pilot tools for planning, feedback and localized content recommendations, alongside peer forums supported by AI agents to foster collaboration.
- **Strengthening systems and national capacity:** AI will help ministries of education strengthen digital governance, develop AI literacy pathways aligned with curricula and enhance teacher certification frameworks. These tools will support long-term systems strengthening, ensuring that AI complements – rather than replaces – public education infrastructure

➤ Innovation in emergencies: Digital School in a Box

The Learning Passport continues to innovate to meet the needs of learners affected by emergencies, displacement and school closures. The Digital School in a Box (DSiB) offers a portable, offline-ready solution that includes preloaded devices, local servers, connectivity, solar power, teacher training and tailored learning content. Designed for rapid deployment in humanitarian settings, the DSiB enables continued access to educational materials, national curricula, digital skills training and well-being resources even in the absence of connectivity or formal school infrastructure.

The DSiB and its diverse components are being prototyped, with pilot implementations planned in fragile contexts and underserved areas through late 2025 and 2026. Guided by user feedback, field testing, and contextual insights this will continue to evolve as part of the broader UNICEF strategy for educational technology in emergencies.

➤ Giga x LP: Powering connectivity and learning in Botswana

Botswana demonstrates the powerful synergy between the Learning Passport and Giga.⁹ Through the SmartBots Village Connectivity Project, which Giga supported, more than 700 schools have been connected to high-speed internet, unlocking access for more than 400,000 students.

Launched in 2024, the Botswana Learning Passport is currently supporting senior secondary learners and is set to expand to younger age groups. To date, more than 420 teachers have been trained. Real-time performance monitoring ensures reliable connectivity and continuous learning, and offline versions are also being developed to ensure equitable access in remote and underserved areas

© UNICEF/PRYCE

➤ Inclusive by design: Accessible digital textbooks in Jamaica

Jamaica is pioneering inclusive education through the integration of Accessible Digital Textbooks (ADTs) on its Learning Passport platform.⁸ Featuring text-to-speech, Jamaican Sign Language video, adjustable fonts and interactive tasks, the 12 ADT titles support all learners – especially children with disabilities. As part of UNICEF's Summer Spark campaign, all students can engage in literacy and numeracy challenges using the ADTs, boosting foundational learning and digital literacy. With more than 420 educators trained, Jamaica is demonstrating how accessible and inclusive content and creative programming can drive equitable learning outcomes at scale.

⁸ UNICEF is collaborating with OpenAI to produce Accessible Digital Textbooks that are accessible for all children, including students with disabilities.

⁹ Giga is an initiative launched by UNICEF and the International Telecommunication Union, working to connect every school to the internet and expand information and opportunity for young people.

THE PATH FORWARD

In 2025, the Learning Passport has expanded its global reach, deepened its impact and contributed meaningfully to education system strengthening.

Yet with 272 million children still out of school and 234 million affected by emergencies, the global learning crisis remains urgent. Addressing this challenge requires bold innovation, stronger and more resilient education systems and significantly expanded access to inclusive, equitable learning opportunities.

Building on this evidence-based approach, UNICEF is leading a digital transformation rooted in sustainable, inclusive solutions that empower children, young people and educators, while reinforcing the resilience of national education systems. The Learning Passport priorities for 2025 and beyond reflect this commitment.

Key Priorities for 2025 and beyond

- **Transition to open-source platform or model:** The LP will adopt an open-source model, enabling governments and countries to deploy, customize and manage the platform within their own infrastructure. This will enhance interoperability with national digital ecosystems, support long-term sustainability, and advance progress toward Digital Public Good (DPG) recognition, promoting transparency, adaptability, and resilience.
- **Scaling with purpose:** The LP will focus on evolving as a comprehensive, open-source ecosystem which strengthens education systems and expands access to quality learning. The platform will prioritize support for vulnerable and underserved groups such as crisis-affected learners, out-of-school youth and educators.

- **Leveraging AI:** The LP will continue to harness AI to develop a more intuitive and responsive platform. This includes personalizing learning pathways, enabling adaptive content delivery, streamlining localization and enhancing educator support, particularly in low-resource settings. AI-driven analytics will also inform real-time decision-making.
- **Expanding access in emergencies:** The LP will advance solutions for learners affected by emergencies, including through expansion of the offline LP and the piloting of the Digital School in a Box (DSiB) – a portable, all-inclusive solution that provides offline connectivity, content and power. DSiB offers continuity of learning in fragile contexts through rapid deployment in emergency and low-connectivity environments.
- **Strengthening collaboration and innovation:** Achieving this vision will require mobilizing support from strategic and technical partners who can provide technical expertise, scalable solutions, funding and in-kind support to accelerate core areas of development. Priority areas include open-source governance, offline-capable AI, inclusive content design, adaptive learning pathways and DPG recognition. These efforts will be anchored in coordinated collaboration across UNICEF and the wider digital education ecosystem.

With the support of committed partners, UNICEF will continue scaling and refining the Learning Passport to deliver accessible, adaptive and sustainable digital learning solutions that strengthen national systems and reach the most marginalized learners.

ANNEXES

LP PROGRAMME KEY DEFINITIONS

What is the Learning Passport?

The LP is the flagship digital learning programme of the United Nations Children's Fund (UNICEF). Launched in 2018, the programme seeks to democratize access to quality education resources, transcending geographical and socioeconomic barriers by introducing a highly flexible and portable digital education platform that enables children and young people to continue learning anywhere, at any time. It provides the full range of educational content – from foundational learning to skills development – in different contexts, including formal and nonformal educational settings, with and without internet connectivity. By offering a personalized and accessible learning experience, it addresses the educational needs of diverse learners, including those in remote or marginalized communities. lessons in their classrooms.

**I AM LEARNING LIFE LONG LESSONS
THAT WILL HELP ME ACHIEVE
MORE IN THE FUTURE."**

– 18yo Male Student from a Suburban (a town or a village) area in Rwanda using the Learning Passport on a Laptop 2 to 3 times a week in a private school

A world class technology platform, available online, offline and through mobile. Easy to use and ready to meet learner needs, support MoE strategies and more.

Global, regional & in-country technical teams to lead and manage platform development and deployment; and build capacity & coordinate with key stakeholders.

A blended learning approach that includes high-quality, interactive, educational resources, classroom integrations, teacher.

An extensive ecosystem across the public and private sector including governments, companies, foundations, civil society organizations and more.

UNICEF's 70 years of experience in developing and scaling education programs & existing footprint in over 190 countries.

Learning Passport User Metrics

The Learning Passport tracks several key metrics to measure engagement and platform usage, including:

- **Registered users:** The total number of users who have registered on the LP.
- **Course completions:** The total number of courses completed by all registered users.
- **Trained users:** The number of users who have enrolled in at least one course on any LP platform.
- **Available courses:** The number of courses currently available on all LP platforms.

How does the Offline Learning Passport Work?

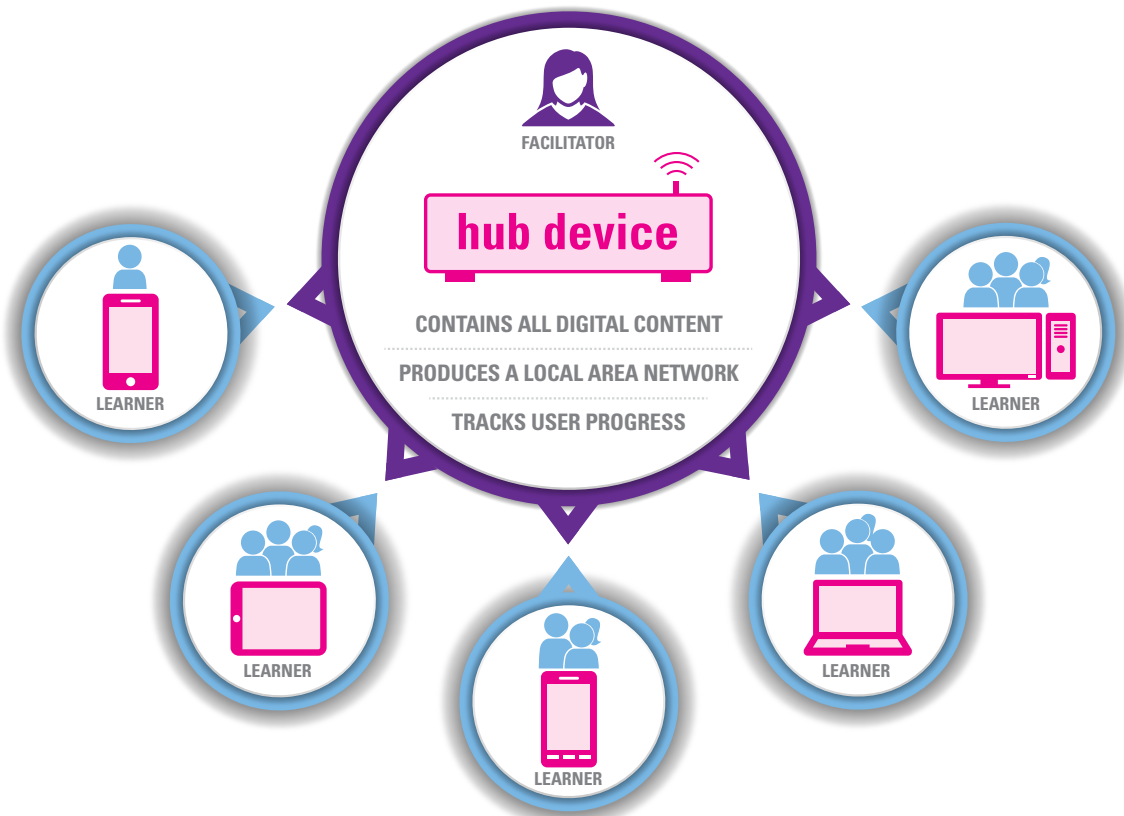

The Offline Learning Passport programme provides learners with access to a digital learning experience by simulating the internet and a web experience without underlying connectivity infrastructure. The LP hub device is specifically designed for UNICEF to use in no-connectivity settings and houses customized, contextualized and curated digital content, unique to each LP deployment. The device creates a local area network, similar in concept to Wi-Fi, but with a wider radius and the ability to host more concurrent users.

Once the hub device is placed in a classroom or learning center, learners – using any device with a browser such as a PC, tablet or smart phone – can connect to the network created by the device, log in to the LP platform and create profiles with unique credentials. They can then begin taking lessons, reviewing formal, nonformal or supplementary curriculum and completing assessments to earn certificates, all while their progress is recorded in an individual record unique to them.

Teachers can also use the educational resources available on the offline LP to enhance and support the lessons in their classrooms.

GENERATION UNLIMITED'S PASSPORT 2 EARNING

In today's rapidly changing world of work, many young people are being left behind due to a lack of access to relevant skills and opportunities. This not only makes it difficult to earn a living but also undermines the potential for social and economic progress. The skills required to navigate a stable livelihood are rapidly evolving due to the emergence of new technologies, and young people must have access to the tools and resources required to adapt and thrive.

By providing multiple avenues for learning, digital platforms offer young people the opportunity to access free content and curricula, enabling them to acquire new skills and connect with job opportunities.

Passport to Earning is a program that equips young people (15-24) with free, certifiable and in-demand skills, which position them to access advanced training and earning opportunities. P2E leverages a digital platform to offer market-relevant content curated with public and private sector partners, and utilises online, blended and offline approaches to reach youth in different contexts.

P2E works with:

- Employers and companies with expertise in hiring and developing talent
- Government partners who adapt, optimize, certify, and deliver skilling programmes fit for the local context and market
- Youth advisers who help refine the offerings as per young people's needs and aspirations

In its first three-year phase, P2E trained and provided certificates to 3.5 million young people on digital, financial literacy and employability skills, including

© UNICEF/UNI612449/JYAKAREMYE

over a million adolescent girls and young women. By 2030, P2E aims to skill 20 million young people and support 1 million to access advanced training, jobs, and entrepreneurship opportunities.

The programme is extending to 15 countries, and already implements in Bangladesh, [Brazil](#), Egypt, [India](#), Niger, [Nigeria](#) and Philippines and Rwanda.

As of August 2025, 4.6 million young people — including over 2.2 million adolescent girls and young women - have completed courses and received certificates from P2E programmes. This includes 2 million young people who were trained in digital and AI skills.
